EXPERIENCE

Owner / Audio Engineer / Producer

Sound Cellar Recording | 2016 – Present

- Managed full-cycle audio production projects from initial client consultation through final delivery.
- Coordinated recording sessions, project scheduling, and client communications for multiple concurrent productions.
- Engineered, mixed, and mastered professional audio productions for independent artists and commercial projects.
- Arranged music and multi-instrumental productions tailored to client creative goals and project requirements.
- Built and maintained custom recording workstations, including hardware installation, system optimization, and performance troubleshooting.
- Installed, configured, and maintained audio software, drivers, plugins, and operating systems for stable recording performance and low-latency workflows.
- Wired and maintained studio patchbay systems and audio signal routing infrastructure to ensure reliable operation and clean signal flow.
- Managed studio website content, online presence, booking operations, and client deliverables.

Designated Program Coordinator

JP Morgan Chase | 2012 – 2016

- Provided client support through in-person, phone, and email communication while ensuring timely issue resolution.
- Investigated client concerns, identified solutions, and escalated complex cases to appropriate departments when necessary.
- Trained clients on company-provided SaaS platforms and guided users through product functionality and troubleshooting.
- Authored procedural and operational documentation used across the department to improve consistency and workflow efficiency.
- Maintained accurate service documentation and client-related records while ensuring compliance with company policies and regulatory standards.

Broadband Support Manager

Teleperformance USA (Cricket Communications) | 2006 – 2012

- Led a technical support team assisting customers with broadband connectivity, device configuration, and network-related issues.
- Troubleshoot hardware, firmware, drivers, and client-side software affecting connectivity and system performance.
- Managed escalated support cases involving provisioning, software configuration, and application-level troubleshooting.
- Coached and mentored support agents to improve troubleshooting efficiency, technical accuracy, and customer satisfaction.
- Analyzed technical metrics and reporting data to identify trends and support process improvements.
